DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 08/427,490, filed on April 24, 1995.

Specification

The disclosure is objected to because of the following informalities: While the drawings show oscillation of the high frequency component, no mention in the specification of the high frequency component oscillating.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 23-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirao (U.S. Pat. No. 4,924,317). Hirao teaches a first lens (zoom lens group 18-1 to 18-3) for performing a magnification operation, a second lens (focus lens 18-4) for correcting movement of a focal plane during movement of said first lens, lens moving means 19 for independently moving said

first and second lenses to be parallel to an optical axis, extracting means 4 for extracting a high frequency component Y from a video signal of a photographed object, and first moving condition switching means 5 for switching a moving condition of said second lens during movement of the first lens so that a high frequency component amount of the video signal oscillates (figure 6d-e). The applicant is directed to review figures 3, 5 and 6 as well as col. 5, line 65 to col. 7, line 39.

Response to Arguments

Applicant's arguments with respect to claims 23-30 have been considered but are moot in view of the new ground(s) of rejection.

The movement of the focusing lens in Hirao oscillates the high frequency component. See figure 6d.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
